

PRINTABLE INSULATING COMPOSITIONS AND PRINTABLE ARTICLES

Abstract

A printable composition for forming an insulating layer is disclosed, the
5 insulating layer typically being a dielectric layer. The printable composition is
particularly well suited for making cured insulating layers on touch screens, but is also
suitable for a variety of other applications. In certain embodiments the composition is
suitable for application using digital printing technology such as ink jet printing to
precisely apply the printable composition it to a substrate. In addition, the present
10 invention is directed to insulating layers and made using the composition, as well as to
methods of applying the composition and articles incorporating insulating layers made
using the composition.
